Email: siva.akasapu76@gmail.com

Objective:

Offering around 5.5 years of experience as a Test Specialist. Experience in designing, developing, and executing automated test scripts for web applications. Proficient in various automation testing tools and frameworks, with a proven ability to improve test efficiency, accuracy, and coverage. Seeking a challenging role where I can utilize my expertise to drive continuous improvement.

Professional Summary:

- Hands-on experience in executing regression test suites using Java and Selenium.
- Independently developed automation test scripts using Robot Framework in the CRT (Copado Robotic Testing) tool. Utilized Java and Selenium for creating robust test automation solutions.
- Hands on experience in executing the Regression test suites and fixing those scripts for any script failures and rerunning the failed test cases and identifying, logging, and analyzing errors during the test execution to facilitate troubleshooting and debugging.
- Expert in developing selenium web driver scripts using TestNG Framework.
- Experience in information technology with emphasis on software quality assurance and automation testing of web applications.
- Experience in implementing QA methodologies, test cases, test scenarios.
- Sound experience in Agile way of working and Agile Ceremonies.
- Experience in several types of framework designs like Robot frameworks and Hybrid frameworks.
- Very good exposure on Page Object Model (POM) design pattern.
- Experience in Bitbucket, Zephyr Scale, CRT (Copado Robotic Testing) tool.
- Excellent organizational, communication, and interpersonal skills.
- Highly focused and Self-Motivated in the fast-paced and demanding work environment.
- Experience on defect tracking systems, bug logging and reporting using Jira and Zephyr Scale.
- Hands on experience in writing the manual test cases and executing them as a test cycle.

IT Skills & Competencies:

Technical Skill	Automation testing and Manual Testing
Technical Capabilities	Java, Selenium WebDriver, CRT (Copado Robotic Testing) Tool, Zephyr Scale, Bitbucket, Jira, Confluence Page.
Testing Framework	Robot framework, Hybrid framework and TestNG
Design Pattern	Page object model
Testing Methodology	Agile methodology

Project Experience Summary:

Project 1: MOC (Feb 2024 –Till today)

Description:

MOC (Ministry Of Cultural)

Contributed to a suite of applications developed for MOC to provide citizens with essential information and services about the country. Dedicated to enhancing public service delivery by developing innovative technology solutions that support government operations and improve citizen engagement.

Domain: Salesforce

Roles & Responsibilities:

- Understanding Requirement Specifications and Design Documents.
- Major Responsibility is to create Automated test scripts for the Web Applications using Selenium WebDriver Tool with Java language binding.
- Designing of test cases, test data preparation, test execution and fixing defects.
- Tracking the bugs in Jira.
- Preparing weekly status report and reporting.
- Participating in daily standup calls, sprint planning, sprint retrospective, and backlog refinement sessions.

Project 2: PO&M (Aug 2023 –Feb 2024)

Description:

PO&M (Price Optimization and Management Capability Transformation)

The main motive is to replace the current pricing system or pricing infrastructure by enabling dynamically managed price lists and price limits. The current pricing infrastructure is insufficient to enable dynamic pricing.

Domain: Salesforce

Roles & Responsibilities:

- Understanding Requirement Specifications and Design Documents.
- Major Responsibility is to create Automated test scripts for the Web Applications using the CRT [Copado Robotic Testing tool].
- Maintaining the Source Code in Bitbucket Repository.
- Tracking the bugs in Jira and Zephyr Scale.
- Updating the Confluence page daily.

Project 3: MyMilliQ (Nov 2022 –Jun2023)

Description:

MyMilliQ is an application which handles the machines installed in the client location and remotely given to the clients. It also provides the maintenance, service requests, service contracts and PM visits. The website is deployed into different markets such as UK, Germany, Norway, etc.

Domain: Salesforce

Roles & Responsibilities:

- Understanding Requirement Specifications and Design Documents.
- Major Responsibility is to create Automated test scripts for the Web Applications using the CRT [Copado Robotic Testing] tool.
- Maintaining the Source Code in Bitbucket Repository.
- Tracking the bugs in Jira and Zephyr Scale.
- Updating the Confluence page daily.

Project 4: Attends (July 2021 – Sep 2022)

Description:

Attends have over 40 years of experience in providing incontinence protection to consumers, care workers and health care professionals worldwide. The ecommerce website was launched for the North European Market. The application is a typical Ecommerce website with User's login functionality, and where a guest/register user can order sample products.

Domain : Healthcare

Roles & Responsibilities:

- Understanding Requirement Specifications and Design Documents.
- Major Responsibility is to create Automated test scripts for the Web Applications using SeleniumWebDriver Tool with Java language binding.
- Maintaining the Source Code in Bitbucket Repository.
- Involved in Functional and regression testing of multiple web applications.
- Designing of test cases, test data preparation, test execution and fixing defects.
- Preparing daily status report and reporting.
- Track bugs and logging defects.
- Participating in daily standup calls, sprint planning, sprint retrospective and backlog refinement sessions.
- Documentation of Test Completion Reports.
- Providing KT to new joiners to the team.

Project 5: LIDL (Apr 2019 - Apr 2021)

Description:

Lidl Stiftung & Co. KG is a German international supermarket chain that has dealings with multiple countries, they import and export goods from various countries. The application helped the customer to upload and track the flow of documents between them and their customers to ease the way of business. This involves a lot of documentation to be done. The application that our team handled eased the way the client used to do the business documentation process. The users can log in and upload the relevant documents and process them, whereas the other users log in and download the documents, sign them upload the documents, and process them further accordingly. This documentation flows through many approvals from Sender and Receiver country personals. Prior to this application, this process was manual, thereby time-consuming and involved too much cost. The application completely changed the way of business and generated profits for the customer.

Domain: Retailer

Roles & Responsibilities:

- Understanding Requirement Specifications and Design Documents.
- Maintaining the Source Code in the GIT Repository.
- Involved in Functional and regression testing of multiple web applications.
- Designing of test cases, test data preparation, test execution, and fixing defects.
- Preparing daily status reports and reporting.

Education:

BSc in Computer Science from Emerald's Degree College, SV University, Tirupati in 2018.

Personal Details:

Date of Birth: 07th July 1997

Languages Known: English, Hindi and Telugu.

Address: #115-8-26, Konthamuru, Rajahmundry 533102.
